

CHAIN ABSTRACTION LAYER

We Don't Transfer Crypto, We Transfer Private Keys

Technology Beyond the Future.

Crypto Processor moves Private Keys not Assets.

Native coins stay locked on their native chains while Private Keys transfers instantly across 100+ blockchains, without bridges, wrapping, or middlemen.

7000 TPS	\$0.01 TX FEE	2sec BLOCK TIME	0sec FINALITY	100+ BLOCKCHAINS
--------------------	-------------------------	---------------------------	-------------------------	----------------------------

01 - INFRASTRUCTURE

Chain Abstraction

One unified interface for ALL Blockchains. Users interact seamlessly performing Any Operation on Any Blockchain with Any Native Coin.

02 - BLOCKCHAIN

CPRO Blockchain

High performance, EVM compatible Layer 1 with Instant finality and Post-quantum security. Built for DeFi at scale.

03 - CORE PROTOCOL

PoKO - Proof of Key Ownership

A novel cryptographic mechanism using MPC, DKG and TSS to transfer Private Keys without moving native assets.

04 - INTEROPERABILITY

Bridge Free Cross-Chain

Universal settlement layer enabling true native Multiswaps across 100+ chains.

No slippage, no delays, no custodians. Bringing full EVM power and DeFi to native Bitcoin for the first time.

05 - SECURITY

Post-Quantum Security

Full quantum resistance via TEE node environments and quantum-proof cryptography.
